Competitive Analysis — Enterprise AI Search 2026

Author: Suresh Iyer
Department: Product
Last Updated: 2026-04-02
Classification: internal

This analysis benchmarks NovaTech's Project Atlas against four primary competitors: Glean, Guru, Notion AI, and SearchAI (stealth startup). NovaTech leads on retrieval accuracy (Qdrant hybrid search) and RBAC granularity. Glean leads on breadth of integrations. SearchAI is a potential acqui-hire target currently under discussion (see Confidential: Acquisition Discussions).

1. Competitive Matrix

Criterion	NovaTech Atlas	Glean	Guru	Notion AI
Retrieval accuracy	★★★★★	★★★★	★★★	★★★
RBAC granularity	★★★★★	★★★★	★★★	★★
Integration breadth	★★★	★★★★★	★★★★	★★★★
Self-serve setup	★★★	★★★★	★★★★★	★★★★★
Pricing	★★★★	★★	★★★	★★★★
SOC 2 Type II	Pending	Yes	Yes	Yes

2. NovaTech's Differentiation

The Qdrant-based hybrid retrieval (dense + BM25 + RRF) gives NovaTech a measurable accuracy advantage. In a blind evaluation on the BEIR benchmark, Atlas scored 0.74 NDCG@10 vs Glean's published 0.69 and Guru's 0.63. Enterprise customers with strict RBAC requirements (financial services, healthcare) consistently cite NovaTech's collection-level RBAC as a decisive factor.

3. Emerging Threats

- SearchAI (stealth): early demos show multimodal retrieval; team is ex-Google.
- Glean v3 (rumoured): reportedly integrating their own vector DB to match our retrieval scores.
- OpenAI enterprise search product: if launched in H2 2026, will commoditise the Starter tier.
