# Customer Segmentation Analysis — NovaTech 2026

Author: Kavitha Ramesh

Department: Product

Last Updated: 2026-03-15

Classification: internal

Analysis of NovaTech's 1 840 paying accounts reveals four distinct segments: Developer Hobbyists (24%), Technical SMBs (38%), Mid-Market Operations (28%), and Enterprise (10%). Enterprise accounts represent 61% of ARR despite being 10% of account count. Project Atlas adoption is highest in the Technical SMB and Enterprise segments.

## 1. Segment Profiles

| Segment        | Accounts | ARR Share | Avg ARR   | Atlas Adoption |
|----------------|----------|-----------|-----------|----------------|
| Dev Hobbyist   | 441      | 4%        | \$410     | 12%            |
| Tech SMB       | 699      | 22%       | \$1 420   | 34%            |
| Mid-Market Ops | 515      | 33%       | \$2 900   | 28%            |
| Enterprise     | 185      | 61%       | \$15 000+ | 51%            |

## 2. Project Atlas Adoption Drivers

Enterprise and Tech SMB segments adopt Atlas at higher rates because they have existing knowledge management infrastructure (Confluence, SharePoint) that Atlas integrates with. Dev Hobbyist adoption is blocked by the \$299/mo Growth tier price point required for RBAC, a key Atlas feature.

## 3. Expansion Opportunity

Mid-Market accounts that adopt Project Atlas have a 4.2× higher 12-month expansion rate than non-Atlas accounts (\$8 200 vs \$1 950 NRR). Prioritising Atlas enablement for the 370 eligible Mid-Market accounts not yet using Atlas represents an estimated \$2.3M ARR expansion opportunity.
