Classification: public

This document defines NovaTech's 2026 pricing architecture for the Atlas platform. Three tiers are proposed: Starter (\$49/mo), Growth (\$299/mo), and Enterprise (custom). The shift from per-seat to usage-based pricing (per-query) for the Growth tier reflects feedback from 14 customer discovery interviews conducted in February 2026.

1. Pricing Tiers

Tier	Price	Queries/mo	Docs	RBAC	Support
Starter	\$49/mo	1 000	500	No	Email
Growth	\$299/mo	10 000	10 000	Yes	Chat
Enterprise	Custom	Unlimited	Unlimited	Yes	Dedicated

2. Pricing Rationale

Competitive analysis (see Competitive Analysis document) shows primary competitors charging \$0.04–\$0.08 per query for comparable RAG APIs. NovaTech targets \$0.03/query at Growth tier volume, implying a contribution margin of 58% after LLM and infrastructure costs.

Enterprise deals are priced on a 3-year TCO basis with volume discounts starting at 15% for >500 000 queries/mo. The Project Atlas enterprise pilot with FinCorp (signed March 2026) is priced at \$48 000/year for 1.2M queries/mo.

3. Usage Overages

Starter and Growth tiers incur overage charges of \$0.06/query beyond the included allowance. Overage billing is capped at 2× the base plan price per month to prevent bill shock. Customers are notified at 80% and 100% of their monthly allowance via email.
