Product Analytics Review — Q1 2026

Author: Arun Balachandran

Department: Product

Last Updated: 2026-04-08

Classification: internal

Q1 2026 saw 34% growth in Monthly Active Users (MAU) to 12 400, driven by the Project Atlas private beta and a January 2026 Product Hunt launch. Query volume reached 4.2M/month, up from 2.8M in Q4 2025. Day-30 retention improved from 38% to 51% following the onboarding flow redesign shipped in February 2026.

1. Growth Metrics

Metric	Q4 2025	Q1 2026	QoQ Change
MAU	9 250	12 400	+34%
WAU	5 100	7 800	+53%
Query Volume/mo	2.8M	4.2M	+50%
Day-7 Retention	58%	64%	+6pp
Day-30 Retention	38%	51%	+13pp
Avg Queries/User	302	339	+12%

2. Qdrant-Powered Query Quality

After migrating from keyword search to Qdrant-based hybrid retrieval in January 2026, the 'Answer Not Found' rate dropped from 18% to 6%. Users who receive a cited answer have a 2.4× higher Day-30 retention rate than those who receive an 'Answer Not Found' response. This validates the investment in Project Atlas's retrieval infrastructure.

3. Feature Adoption

- RBAC (enterprise tier): 78% of enterprise accounts have configured at least one role.
- Citation display: 65% of users click through to at least one source per session.
- Conversation history: 43% of WAU users use follow-up questioning.
- API access: 29% of Growth accounts are API-only (no web UI usage).
